

One-knob church-wide sound system control.

Or not.

**RPM Drag Net™ Audio
Multiprocessor solutions
from Rane.**

On Sunday, your church is blessed with a great crew of sound system volunteers.

But what about the rest of the week?

Now you can have one-knob, church-wide sound control right from the pulpit when you want it.

Or turn the whole system over to the technical types at the touch of a button.

RPM Programmable Multiprocessors let you or your sound contractor create presets for any church activity...

There's a Rane RPM solution to fit any size church.

from a simple service with automatic mixing to a full-on choir-and-praise-band on Sunday. Control sound levels in nurseries or overflow rooms, balconies or entry areas with easy-

to-use Rane in-wall remotes or let your RPM system handle everything automatically.

RPM Multiprocessors seamlessly integrate with the sound equipment you already have. And, because it's a Drag Net programmable digital system, RPMs can change along with your church's music ministry (and budget) instead of becoming obsolete in a few years.

Designed and built in Mukilteo, Washington, the Rane RPM series have a proven track record of reliability in hundreds of churches across the U.S. To see a few recent examples, visit www.rane.com/worship.html

Or call your local sound contractor and ask about the automated system that can handle sanctuary sound seven days a week.
