# The smartest way to manage a paging system

Halogen software does the page source and zone wiring for you. Wire system-wide background music sources into the single Distributed Program Bus to automatically wire all music sources to every output zone. Paging Station DSP blocks automatically connect input page sources to paged zones.

Wiring from all page sources through the Paging Manager to all page zones – including rooms that combine – is automatic. The Paging Manager easily maps all page sources to any combination of zones when using the Paging Zone, Paging Station, Zone Processor, Room Combine Processor and Emergency Page blocks.
