

Multi-use spaces — easy as...

Gym, cafeteria, theater, worship space, auditorium... a multi-use space can easily be all of those and more in the course of a week. Your clients need an AV system that makes re-configuring the room easy. Give them one-knob control and navigation with SR Smart Remotes: small as a light switch, powerful as a panel. Large custom illuminated bitmap images make it easy to choose the right preset with a push of the knob: turning it will adjust levels. Behind the SR Remote's display, RPM Programmable Multiprocessors simplify your job. DragNet software's intuitive graphic interface lets you program up to 24 configurations quickly, with fully configurable matrix routing, automixing, feedback suppression, ambient noise compensation, automatic

level control, and more — so much more, our engineers have built versatile, multi-functional processing blocks that make programming easy. Any of your presets can connect with Logic Output Ports to control other equipment via contact closures. With these tools, you can go beyond compromise to complete solutions — and smiling clients. For 25 years we've been developing products that make professional sound simpler and easier with practical innovation and extreme quality. We've also built a reputation that's second to none. Start building your own reputation: download DragNet software for Windows at www.rane.com, or contact us for a demo of Rane Programmable Multiprocessors and Smart Remotes.
