

## Room combining — easy as...

Your client might split and recombine rooms three or four times a day. It doesn't have to be rocket science — for them or for you.

Our user-friendly SR 3 Remote recalls presets with a push of a knob and controls level just as easily by turning the same knob. Backlit custom images make operation quick and intuitive under any lighting condition. Depending on the preset, the remote is either independent or linked to other remotes in the same zone.

Need multiple sources, automixing, room EQ, ambient noise compensation? Our RPM Programmable Multiprocessors do all that and much more. Versatile Input and Output Logic Ports allow interfacing to other equipment.

DragNet software lets you program the entire system — complete DSP signal chains, auxiliary outputs, even the Smart Remotes — with an intuitive graphic interface.

Your job is delivering great sounding, user-friendly systems, not deciphering complex software. We've got your tools: products that solve problems with practical innovation and extreme quality.

Over 25 years of developing real solutions, we've also built a reputation that's second to none.

Ready to hear more? Download DragNet software for Windows at [www.rane.com](http://www.rane.com). Or contact us for a demo of Rane Programmable Multiprocessors and Smart Remotes.
